

## TMV HEALTH CHECK SERVICE

**Fully functioning thermostatic mixing valves (TMVs) are an important part of hygienic, safe and efficient washrooms. They're integral to:**

- Avoid potential for scalding
- Optimum user comfort
- Effective infection control and targeting bacteria
- Keeping energy and water costs down
- Complying with regulations

TMVs should be checked at least every year to ensure they're performing at their best. Especially because it's not always obvious when a valve isn't working as it should be.

**Rada's TMV Health Check Service\* is our cost-effective plan that will get your TMVs back to full health and includes:**

- Valve inspection
- Access to Rada's service and specification specialists
- Exclusive spare part discounts
- Extended hours call-outs
- No requirement to enter a contract

This service also offers access to our **extended guarantee option**. If Rada checks your valves up to 12 months after their installation, you'll receive a free one-year extension to your current warranty.
