

Rada Safetherm

Putting safety first in healthcare

+ Safety first from the very start.

Every year it's estimated more than 4 million people acquire healthcare associated infections (HCAIs) in the EU, and more than 37,000 people die as a direct result. As many as 30% of these deaths are considered to be preventable with more effective hygiene and control programmes. An important part of any programme is choosing the right clinical tap.

Rada Safetherm has been designed for the clinical environment and fully complies with Health Building Note 00-10 Part C: Sanitary Assemblies and Health Technical Memorandum 04-01: Safe Water in Healthcare Premises.

For additional security, at the end of the assembly process, we also add Freebac® - a powerful disinfectant that destroys and prevents microbial growth in the time between manufacturer testing and final installation.

So when you choose Rada Safetherm, you're choosing a product that puts people's safety first from the very start.

† European Centre for Disease Prevention and Control.

The Experts in commercial showering and washroom controls and systems for over 90 years

Demountable for cleaning

Tap can be isolated and easily removed from pipework for cleaning and sterilisation.

Easy maintenance

Integral isolator valves allow for easy local maintenance on each tap.

Quality chrome finish

High quality plating is resistant to pitting and easier to clean.

Product information

1.1704.001 Rada Safetherm

1.1704.002 Rada Safetherm Basin Mount

Deck mount option

Safetherm offers a choice of either wall or deck mounted configurations for use on two tap hole basins, making the change from existing taps simple.

Accessible filters

Conveniently located behind a robust brass hex nut, the filters are easy to get to for cleaning.

Safe to touch

Patient and staff safety is assured with Rada's Insutech™ technology, which limits surface temperatures to a safe level.

Spout positioning

Positioning the spout at the bottom of the body, allows water to drain from the cartridge, unlike other designs where it's mounted higher up the body, which traps residual water in the base.

Flow straightener

Features a chrome-plated, open-outlet flow straightener with a copper-lined internal bore and a silicone seal. Removable to manage scale build-up - helps prevent scale from forming on end of spout

+ Putting expert products in expert hands

As well as helping you choose the right products for your healthcare project, we can help you decide on the best service package to safeguard the quality, performance and compliance of your systems. For complete peace of mind, our Commissioning Service provides you with accurate product set-up and confirms correct site and installation parameters for the safe operation of the products installed.

What's more, if we commission the products, our standard 2 year warranty is extended by a further 3 years, to 5 years parts and labour.

As well as the options for preventative maintenance, we also offer in-service testing and breakdown cover. For more information, please contact us as below.
